

QPD Ge wafer — unshielded surface, 3 GW_{th} at 25 m — reconstructed-energy spectra, veto credit 1.0 by construction

Bounds are not estimates: summing them makes S/B_{particle} a LOWER bound (7.3×10^{-3}). Ge inelastic (≤ 2666.83) excluded — loose by ~ 3 decades in the RoI. LEE carried as a band, never summed in.
